EDUCATION

University of California San Diego | La Jolla, CA

B.S. in Data Science; Minor in Economics | GPA: 3.8/4.0

March 2027

Relevant Courses: Computer Organization, Data Structures, Foundations of Programming, Algorithms & Analysis, Data Management, Data Visualization, ML: Learning Algorithms, Recommender Systems & Web Mining, Econometrics

WORK EXPERIENCE

Software Engineer Intern | Moody's Ratings | New York, NY

June 2026 - August 2026

- Developed modular, reusable Layer Cake and D3.js components within SvelteKit ecosystem, integrating them into the official, public facing Flipbook production template used for monthly and quarterly financial publications.
- Drove full stack application stability by engineering robust UI components, expanding test coverage, and resolving production bugs while managing the deployment of optimized static assets to secure on premise servers.

LLM Engineer Intern | Center for Applied Internet Data Analysis | La Jolla, CA

August 2025 - April 2026

- Developed and optimized an ML tool for extracting resources from research papers, improving extraction efficiency.
- Leveraged prompt engineering and the OpenAI API to build a robust data extraction pipeline using LLMs.
- Systematically tested multiple versions of the data extraction process to identify the optimal performing model.

Junior Engineer Intern | Resolve Tech Solutions (SAP Partner) | Addison, TX

June 2025 - August 2025

- Engineered an end-to-end machine learning pipeline using NLP/NER for automated support ticket classification, prototyping its deployment via ServiceNow and incorporating industry feedback to validate solution effectiveness.
- Contributed to the full stack development of a new software application designed to streamline and expedite the employee onboarding process, involving work on web design, front end implementation, and back end engineering.

PROJECTS

Smart Ticket Classifier | <https://smart-ticket-classifier.streamlit.app/>

June 2025

- Developed an AI-powered IT Ticket Assistant using Python, training a Sentence-Transformer deep learning model for topic classification and a custom spaCy model for Named Entity Recognition (NER) to extract key details.
- Designed and deployed an interactive Streamlit application that intelligently handles unknown ticket types by performing a semantic search against a historical database, enabling data-driven discovery of new service categories.

ode2net | <https://github.com/DevKlim/ode2net>

May 2025

- Co-developed and implemented a novel deep learning pipeline to generate expressive, genre and emotion conditioned MIDI music from full-text novel chapters using a custom trained Transformer decoder.
- Integrated NLP and symbolic music modeling by mapping chapter-level emotional content to musical features, enabling dynamic text-to-music synthesis for adaptive audiobooks, narrative-driven soundtracks, etc.

Treadmill Fitness Visualization | <https://seashello.github.io/dsc106-final-project>

March 2025

- Co-developed an interactive, animated simulation platform that models endurance performance across different age and gender groups, revealing how physiological factors like stamina and cardiovascular capacity evolve over time.
- Integrated real-time data visualizations and dynamic animations to bring complex fitness trends to life.

Recipe Complexity Report | <https://jex004.github.io/Recipe-Complexity-Report/>

November 2024

- Partnered with a peer to define and quantify recipe complexity, using various metrics such as ingredient count, preparation time, etc. to create complexity scores and correlate them to recipe popularity on Food.com.
- Executed a thorough exploratory data analysis, including feature engineering, missing-data diagnostics, and multivariable correlation studies, uncovering key relationships among recipe attributes and user interaction patterns.

SKILLS, TOOLS & INTERESTS

Programming Languages: Python, Javascript, SQL, Java, R

Skills: HTML; CSS; Git; Scikit-Learn, PyTorch; TensorFlow; OpenAI API, Google Cloud; AWS; React; SvelteKit; Node.js
